Making Tables from E-R Diagrams

- Create the Database using Apache Open Office Base Application
- Build the tables
 - One per entity
 - Plus one per M:M relationship
 - Choose terse but memorable table and field names
- Pick a primary key for each entity
- Retrieve Tuples as per the requirement

Referential Integrity

- Foreign key values must exist in other table
 - If not, those records cannot be joined
- Can be enforced when data is added
 - Associate a primary key with each foreign key
- Helps avoid erroneous data
 - Only need to ensure data quality for primary keys

Before You Go

On a sheet of paper, answer the following
(ungraded) question (no names, please):

What was the muddiest point in
today's class?
