The Web

Week 10

LBSC 671

Creating Information Infrastructures

Virtual Private Networks

a secure private network over the public Internet

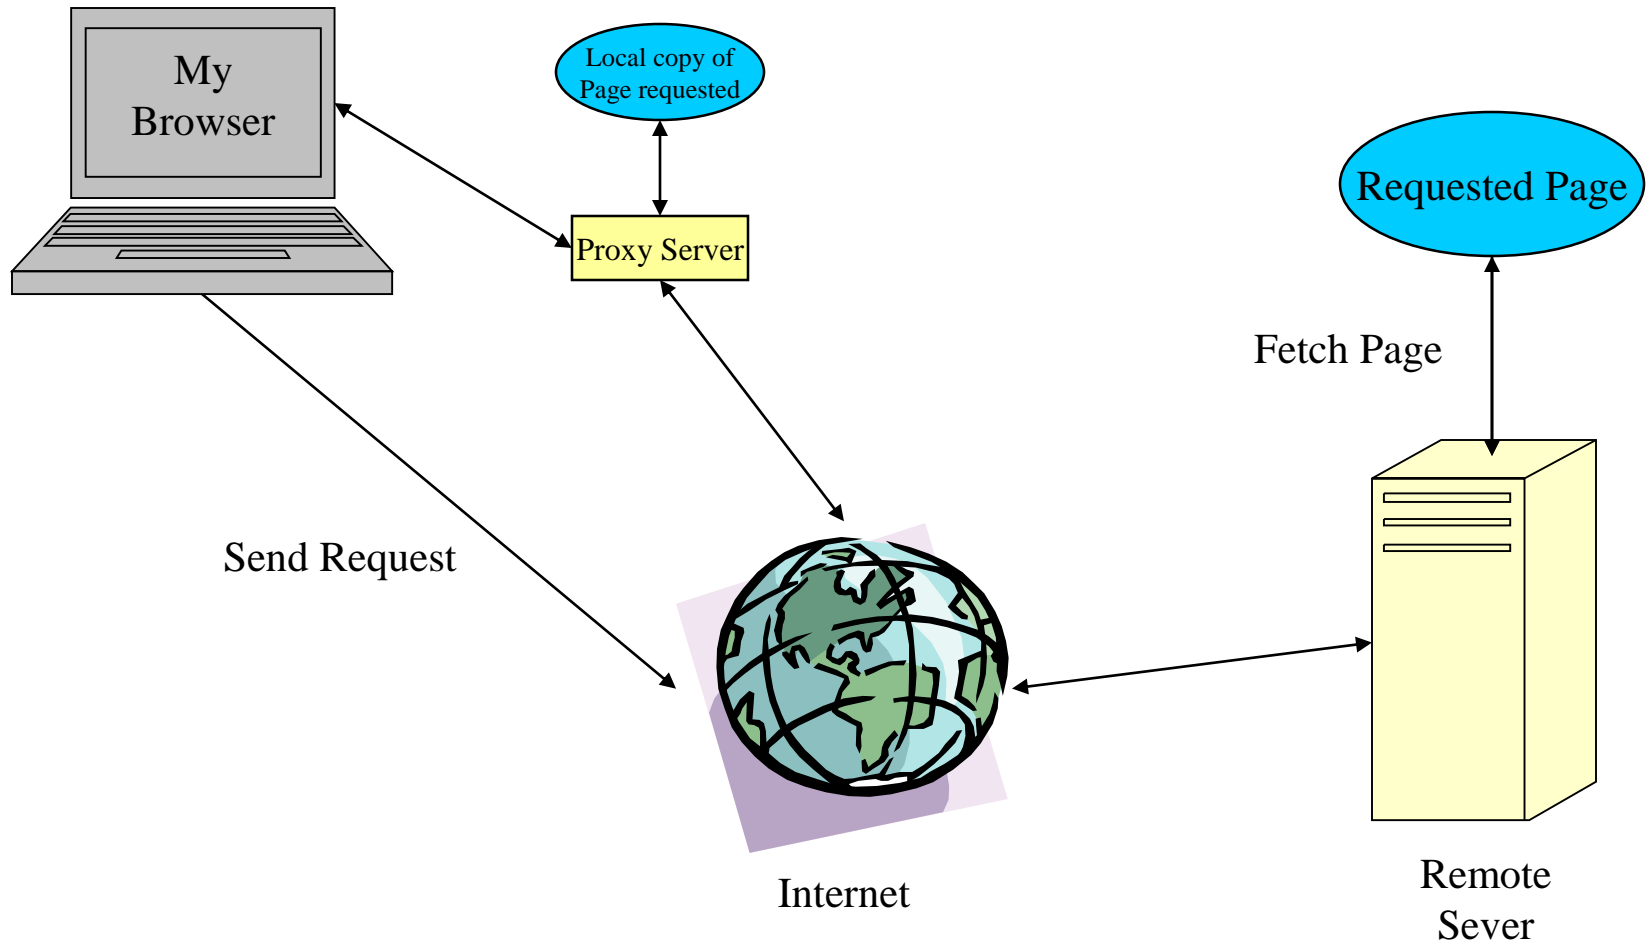

Tonight

- Think about what the Web “is”
- Learn to create a Web page
- Begin to think about Web design
- Talk conceptually about databases

Internet \neq Web

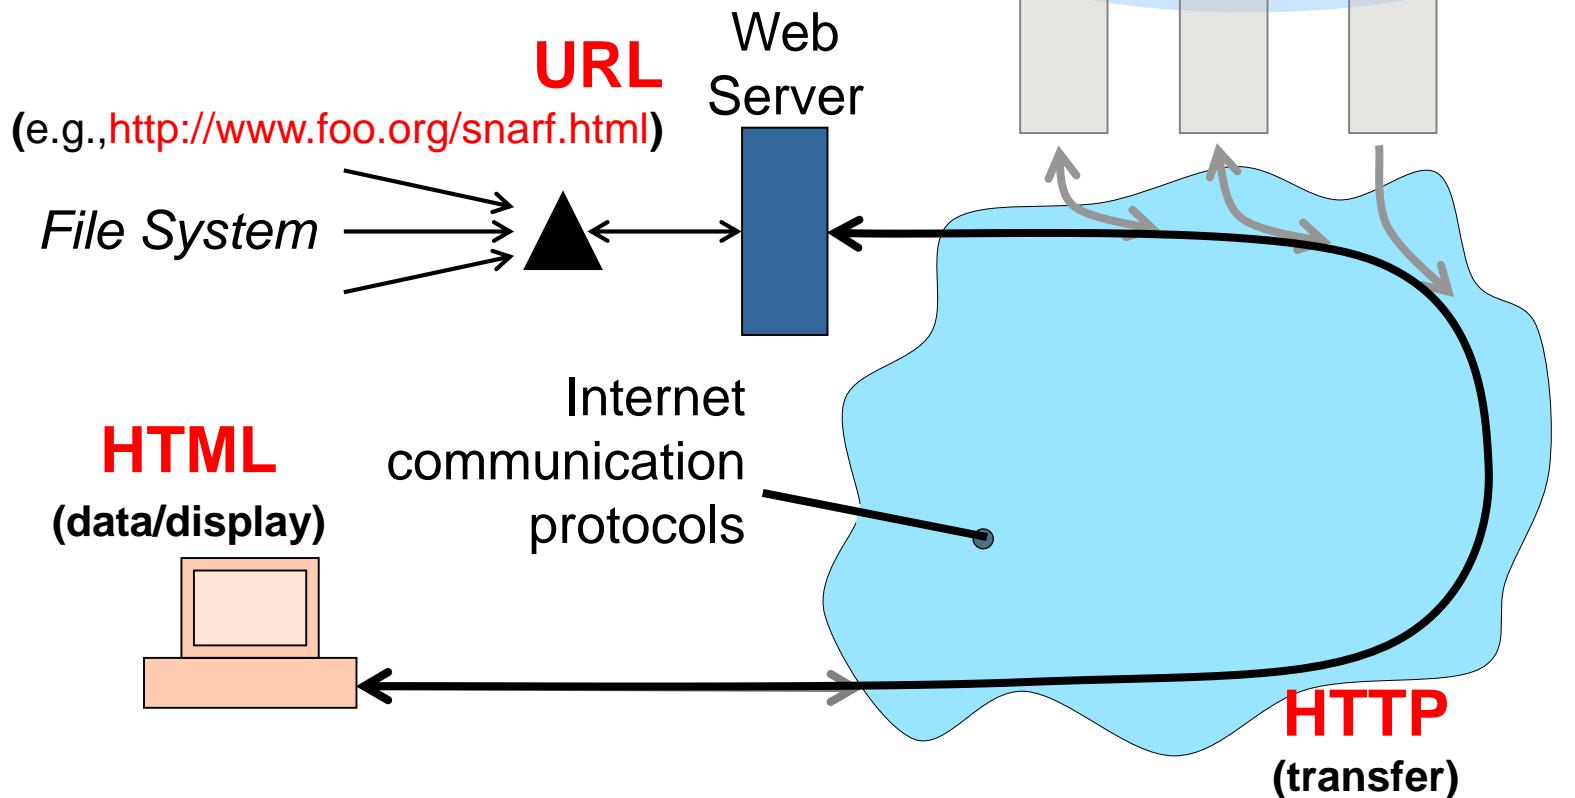

- Internet: collection of global networks
- Web: way of managing information exchange
- There are many other uses for the Internet
 - File transfer (FTP)
 - Email (SMTP, POP, IMAP)

The World-Wide Web

"The Web"

HTML
HTTP
URL

What is the Web?

- Protocols
 - HTTP, HTML, or URL?
- Perspective
 - Content or behavior?
- Content
 - Static, dynamic or streaming?
- Access
 - Public, protected, or internal?

Perspectives on the Web

- Web “sites”
 - In 2002, OCLC counted any server at port 80
 - Total was 3 million, an undercount
 - Misses many servers at other ports
 - Some servers host unrelated content (e.g., TerpConnect)
- Web “pages”
 - In 2012, Google counted any URL it has seen
 - Total was 30 trillion, an overcount
 - Includes dead links, spam, ...
- Web “use”
 - Google users pose 3 billion queries a day

Crawling the Web

Robots Exclusion Protocol

- Requires voluntary compliance by crawlers
- Exclusion by site
 - Create a robots.txt file at the server's top level
 - Indicate which directories not to crawl
- Exclusion by document (in HTML head)
 - Not implemented by all crawlers
 - `<meta name="robots" content="noindex,nofollow">`

Web Crawl Challenges

- Discovering “islands” and “peninsulas”
- Duplicate and near-duplicate content
 - 30-40% of total content
- Link rot
 - Changes at ~1% per week
- Network instability
 - Temporary server interruptions
 - Server and network loads
- Dynamic content generation

Duplicate Detection

- Structural
 - Identical directory structure (e.g., mirrors, aliases)
- Syntactic
 - Identical bytes
 - Identical markup (HTML, XML, ...)
- Semantic
 - Identical content
 - Similar content (e.g., with a different banner ad)
 - Related content (e.g., translated)

Link Structure of the Web

Nature **405**, 113 (11 May 2000) | doi:10.1038/35012155

Global Internet Users

Most Widely-Spoken Languages

Global Trade

Leading economies of merchandise trade, 2009

Why is there a Web?

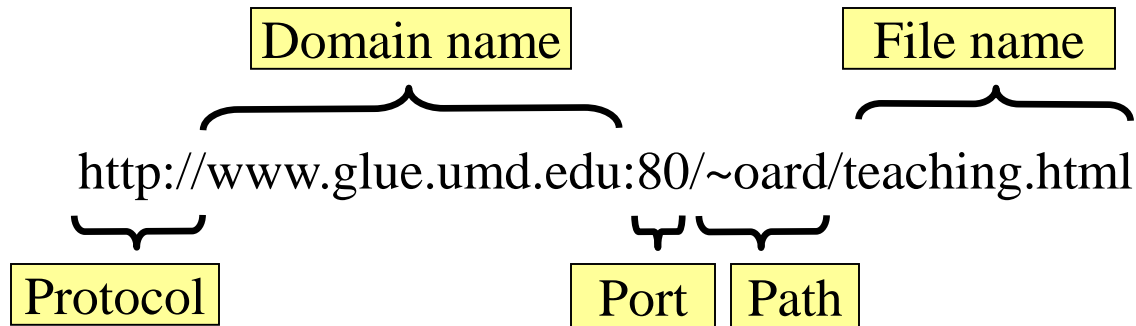

- Affordable storage
 - 300,000 words/\$ in 1995
- Adequate backbone capacity
 - 25,000 simultaneous transfers in 1995
- Adequate “last mile” bandwidth
 - 1 second/screen in 1995
- Display capability
 - 10% of US population in 1995
- Effective search capabilities
 - Lycos and Yahoo were started in 1995

Web Standards

- HTML
 - How to write and interpret the information
- URL
 - Where to find it
- HTTP
 - How to get it

Uniform Resource Locator (URL)

- Uniquely identify Web pages

HyperText Markup Language (HTML)

- Simple document structure language for Web
- Advantages
 - Adapts easily to different display capabilities
 - Widely available display software (browsers)
- Disadvantages
 - Does not directly control layout

“Hello World” HTML

This is the header

```
<html>  
<head>  
<title>Hello World!</title>  
</head>
```

```
<body>  
  
<p>Hello world! This is my first webpage!</p>  
  
</body>  
</html>
```

This is the actual content of the HTML document

Hands On:

Learning HTML From Examples

- Use Internet Explorer to find a page you like
 - <http://www.glue.umd.edu/~oard>
- On the “Page” menu select “View Source” (in IE)
 - Opens a notepad window with the source
- Compare HTML source with the Web page
 - Observe how each effect is achieved

Hands On: “Adopt” a Web Page

- Modify the HTML source using notepad
 - For example, change the page to yours
- Save the HTML source somewhere
 - In the “File” menu, select “Save As”
 - **Put the name in quotes (e.g., “test.html”)**
- FTP it to your ../pub directory on terpconnect
- View it
 - [http://terpconnect.umd.edu/~\(yourlogin\)/test.html](http://terpconnect.umd.edu/~(yourlogin)/test.html)

Tips

- Edit files on your own machine
 - Upload when you're happy
- Save early, save often!
- Reload browser to see changes
- File naming
 - **Don't use spaces**
 - Punctuation matters

HTML Document Structure

- “Tags” mark structure
 - `<html>a document</html>`
 - `an ordered list`
 - `<i>something in italics</i>`
- Tag name in angle brackets `<>`
 - Not case sensitive (unlike XML)
- Open/Close pairs
 - Close tag is sometimes optional (unlike XML)

Logical Structure Tags

- Head
 - Title
- Body
 - Headers: <h1> <h2> <h3> <h4> <h5>
 - Lists: , (can be nested)
 - Paragraphs: <p>
 - Definitions: <dt><dd>
 - Tables: <table> <tr> <td> </td> </tr> </table>
 - Role: <cite>, <address>, , ...

Physical Structure Tags

- Bold: ``
- Italics: `<i></i>`
- Typeface: ``
- Size: ``
- Color: ``

(Hyper)Links

index.html

```
<html>
<head>
<title>Hello World!</title>
</head>
<body>
<p>Hello world! This is my first webpage!</p>
<p>Click <a href="test.html">here</a> for another page.</p>
</body>
</html>
```

test.html

```
<html>
<head>
<title>Another page</title>
</head>
<body>
<p>This is another page.</p>
</body>
</html>
```

Hypertext “Anchors”

- Internal anchors: somewhere on the same page
 - ` Students`
 - Links to: `Student Information`
- External anchors: to another page
 - `CLIS`
 - `CLIS students`
- URL may be complete, or relative to current page
 - `2`
- File name (in URL) is case sensitive (on Unix servers)
 - Protocol and domain name are not case sensitive

Images

- `` *or* ``
 - ``
 - SRC: can be url or path/file
 - ALT: a text string
 - ALIGN: position of the image
 - WIDTH and HEIGHT: size of the image
- Can use as anchor:
 - ``
- Example:
 - <http://www.umiacs.umd.edu/~daqingd/Image-Alignment.html>

Tables

eenie	mennie	miney
mo	catch	a tiger
by	the	toe

Table Example

```
<table align="center">
<caption align="right">The caption</caption>
  < tr align="LEFT">
    <th> Header1 </th>
    <th> Header2</th>
  </tr>
  <tr><td>first row, first item </td>
    <td>first row, second item</td></tr>
  < tr><td>second row, first item</td>
    <td>second row, second item</td></tr>
</table>
```

Wire Framing

- Design, brainstorming technique
 - Highly conceptual
 - Low-fi
 - Low risk, low cost
 - Rapid
- Incorporates three elements of Web design:
 - Information design: *Which information will go where?*
 - Navigation design: *How will users get around?*
 - Interface design: *How do elements convey functionality?*

WILSON SWORN IN AS PRESIDENT; PLEDGES HIMSELF TO JUSTICE; BIGGEST INAUGURAL THRONG

By STEVEN GREENHOUSE
WASHINGTON — President Obama made addressing climate change the most prominent policy issue of his second inaugural Address, setting in motion what Democrats say will be a deliberately paced but aggressive campaign to build around the use of his executive powers to advancing Congressional legislation.

"We will respond to the threat of climate change, knowing that failure to do so would harm our children and future generations," Mr. Obama said on Monday at the start of eight sentences on the subject, more than he devoted to any other specific area. "Some may still deny the overwhelming judgment of science, but none can avoid the devastating impact of raging fires and crippling drought, and more powerful storms."

The central place he gave to the subject seemed to answer the question of whether he considered it a realistic second-term priority. He devoted more attention to it in the campaign and had delivered a mixed message about its importance since the election.

Mr. Obama is heading into the first having extensively studied the lessons from his first term, when he failed to win passage of comprehensive legislation to reduce emissions of the gases that cause global warming. This time, the White House plans to avoid such a fight and instead focus on what it can do administratively to reduce emissions from power plants, increase the efficiency of home appliances and have the federal government produce less carbon pollution.

Mr. Obama's path on global warming is a case study in how to use his executive powers to advance his agenda. After coming to office four years ago, he pledged to lead the planet and turn back the rise of the seas, he is proceeding cautiously this time, Democrats said, intent on making sure his approach is vetted politically, economically and technologically so as not to risk missing what many environmental advocates say could be the last best chance for years to address the problem.

The counterpart will be action by the Environmental Protection Agency on global warming.

Even if It Enrages Your Boss, Social Net Speech Is Protected

By STEVEN GREENHOUSE
As Facebook and Twitter become as central to workplace conversation as the company cafeteria, federal regulators are ordering employers to scale back policies that limit what workers can say online.

Employees often seek to discourage comments that paint them in a negative light. Don't discuss company matters publicly, a typical social media policy will say, and don't disparage managers, co-workers or the company itself. Violations can be a firing offense.

But as a series of recent rulings and advisories, labor regulators have declared many such blanket restrictions illegal. The National Labor Relations Board says workers have a right to discuss work conditions freely and without fear of retribution, whether

the discussion takes place at the office or on Facebook. In a landmark decision last year, the board ordered various workers' fired for their posts on social networks, the agency has pushed companies nationwide, including giants like General Motors, Target and Costco, to rewrite their social media rules.

"Many view social media as the new water cooler," said Mark G. Pincus, the board's chairman, noting that federal law has long protected the right of employees to discuss work-related matters. "All we're doing is applying traditional rules to a new technology."

The decision came amid a broader debate over what constitutes appropriate discussion on Facebook and other social networks. Schools and universities

OBAMA OFFERS LIBERAL VISION: 'WE MUST ACT'

Speech Gives Climate Goals Center Stage

By RICHARD W. STEVENSON
WASHINGTON — President Obama made addressing climate change the most prominent policy issue of his second inaugural Address, setting in motion what Democrats say will be a deliberately paced but aggressive campaign to build around the use of his executive powers to advancing Congressional legislation.

"We will respond to the threat of climate change, knowing that failure to do so would harm our children and future generations," Mr. Obama said on Monday at the start of eight sentences on the subject, more than he devoted to any other specific area. "Some may still deny the overwhelming judgment of science, but none can avoid the devastating impact of raging fires and crippling drought, and more powerful storms."

The central place he gave to the subject seemed to answer the question of whether he considered it a realistic second-term priority. He devoted more attention to it in the campaign and had delivered a mixed message about its importance since the election.

Algeria Defends Tough Response to Hostage Crisis as Toll Rises

By ADAM NOSSETER and ERIC SCHMITT
ALGERIA — The prime minister of Algeria offered an unapologetic defense on Monday of the country's tough actions to end the Sahara hostage crisis, saying that the militants who had carried out the kidnappings intended to kill all their captives and that the army saved many from death by attacking.

But the assertion came as the death toll of foreign hostages rose sharply, to 21, and as American officials said they had defied sophisticated and well-planned attacks that could minimize casualties, but before the military operation to retake a seized gas field complex in the Algerian desert.

At least some of the hostages were accepted, they said, but there were still questions about whether Algeria had taken all available steps to avert such a bloody outcome.

Inaugural Stresses Theme of Civil and Gay Rights

— Safety Net Praised

By PETER BAKER
WASHINGTON — Barack Obama ceremoniously opened his second term on Monday with an executive inaugural Address that offered a robust articulation of modern liberalism in America, arguing that "preserving our individual freedoms ultimately requires collective action."

On a day that echoed themes from the civil rights era and tributes to the Rev. Dr. Martin Luther King Jr., Mr. Obama dispensed with the post-partisan appeals of four years ago to lay out a broad vision of advancing gay rights, showing more tolerance toward illegal immigrants, promoting the social welfare safety net and acting to stop climate change.

At times he used his speech, delivered from the West Front of the Capitol, to repulse arguments from the full campaign, rebuking the notion expressed by conservative opponents that America risks becoming "a nation of immigrants" and exalting the value of preserving government in society. Instead of declaring the end of "party government," he did taking the oath as the 44th president in 2009, he challenged Republicans to step back from their staunch opposition to his agenda.

"Progress does not come by itself," he said, "but it does require us to act in our time." He said in the 18-minute address, "For now, decisions are upon us, and we cannot afford delay. We cannot remain divided by principle or substance, or by politics or party. We must act."

Mr. Obama used Abraham Lincoln's words, as he did four years ago, but this time added Dr. King's words as well to mark the 50th anniversary of the civil rights leader. He became the first president ever to mention the word "gay" in an inaugural Address as he equated the drive for same-sex marriage to the quest for racial and gender equality.

The festivities at the Capitol came a day after Mr. Obama officially took the oath in a quiet ceremony with his family in the White House on the date set by the Constitution. With Inauguration Day falling on a Monday, the ceremony was then expected for an energized mass audience a day later, accompanied by the pomp and parade that typically surround the quadrennial tradition.

Handfuls of thousands of people gathered on a break in bright day, a huge crowd by any measure, though far less than the record turnout four years ago. (The day fell on a Tuesday, compared with the historic mood the last time, it reflected a more restrained moment in the life of the country. The hopes and expectations that seemed so large with Mr. Obama's taking the office in 2009, even amid economic crisis, have long since faded into a starker sense of the limits of his presidency.)

Now 53 and noticeably grayer, Mr. Obama appeared alternately upbeat and reflective. When he returned to the Capitol at the conclusion of the ceremony, he stepped his entourage to turn back toward the cheering crowds on the National Mall.

"I want to take a look, one more time," he said, "I'm going to see this again."

If the president was wistful, his message was firm. He largely echoed foreign policy except to recommend engagement over war, and instead focused on addressing poverty and injustice at home. He did little to alter the language of the opposition.

OBAMA OFFERS LIBERAL VISION: 'WE MUST ACT'

Speech Gives Climate Goals Center Stage

By RICHARD W. STEVENSON and JAMES H. BRIDGER

WASHINGTON — President Obama made addressing climate change the most prominent policy goal of his second inaugural address, setting in motion what Democrats say will be a deliberately paced but aggressive campaign built around the idea that executive powers to sidestep Congressional opposition.

"We will respond to the threat of climate change, knowing that failure to do so would betray our children and future generations," Mr. Obama said on Monday at the start of eight sentences on the subject, more than he devoted to any other specific area. "None will deny the overwhelming judgment of science, but none can avoid the devastating impact of raging fires, and crippling drought, and more powerful storms."

The central place he gave to the subject seemed to answer the question of whether he could avoid a climate summit in June, a priority he had downplayed since he took office.

Mr. Obama said on Monday that he delivered a muted message about its importance since the election. "It is a challenge to the effort having extensively studied the science of climate change, when he failed to win passage of comprehensive legislation to reduce emissions of the gases that cause global warming. This time, the White House plans to build such a fight and instead focus on the science of climate change to reduce emissions from power plants, increase the efficiency of home appliances and have the federal government itself shed less carbon pollution."

Mr. Obama's path on global warming is a case study in how he is evolving some of the limits of his power and his increased willingness to work around intense conservative opposition rather than seek compromise. After coming to office four years ago on a pledge to hold the planet and turn back the race of the next, he is proceeding cautiously this time, Democrats said, intent on making his approach in vetting politically, economically, and technologically so as not to risk raising what many congressional advisers say could be an alien public for years to address the problem.

The conference will be action by the Environmental Protection Agency's new rule.

Inaugural Stresses Theme of Civil and Gay Rights — Safety Net Praised

By PETER BAKER

WASHINGTON — Barack Hussein Obama continually stressed his second term on Monday with an assertive inaugural address that offered a robust articulation of modern liberalism in America, arguing that "preserving our individual freedoms ultimately requires compromise."

On a day that echoed with reforms from the civil rights era and tributes to the Rev. Dr. Martin Luther King Jr., Mr. Obama dispensed with the post-partisan appeals of last year to lay out a forceful vision of advancing gay rights, allowing the president to make a clear statement on his stance toward illegal immigrants, preserving the social welfare safety net and ending the stop-and-go change.

At times he used his speech, delivered from the West Front of the Capitol to inspire arguments from the full campaign, reducing the nation expressed by conservative opponents that America is becoming "a nation of takers" and casting the value of constructive government in society. Instead of declaring the end of "petty grievances," as he had taken the oath as the 44th president in 2009, he challenged Republicans to step back from their narrow opposition to his agenda.

"Progress does not come to us by settling narrow ideological debates about the role of government for all time," he said in the 18-minute address. "For new decisions are upon us again in the days ahead. We must not mistake abolition for principle or substitute speech for politics or trust name-calling as reasoned debate. We must act."

Mr. Obama said Abraham Lincoln's Bible, as he did four years ago, but this time added Dr. King's Bible as well to mark the holiday honoring the civil rights leader. He was the first president to mention the word "gay" in an inaugural address as he equated the drive for same-sex marriage to the quest for racial and gender equality.

The festivities in the Capitol came a day after Mr. Obama had taken his family to the White House on the day he had the inauguration. His family was on the way to the White House on the day he had the inauguration. His family was on the way to the White House on the day he had the inauguration.

Structured Information

- Field An “atomic” unit of data
 - number, string, true/false, ...
- Record A collection of related fields
- Table A collection of related records
 - Each record is one row in the table
 - Each field is one column in the table
- Primary Key The field that identifies a record
 - Values of a primary key must be unique
- Database A collection of tables

A Simple Example

Registrar Example

- Which students are in which courses?
- What do we need to know about the students?
 - first name, last name, email, department
- What do we need to know about the courses?
 - course ID, description, enrolled students, grades

A “Flat File” Solution

Student ID	Last Name	First Name	Department ID	Department	Course ID	Course description	Grades	email
1	Arrows	John	EE	EE	lbsc690	Information Technology	90	jarrows@wam
1	Arrows	John	EE	Elec Engin	ee750	Communication	95	ja_2002@yahoo
2	Peters	Kathy	HIST	HIST	lbsc690	Informatino Technology	95	kpeters2@wam
2	Peters	Kathy	HIST	history	hist405	American History	80	kpeters2@wma
3	Smith	Chris	HIST	history	hist405	American History	90	smith2002@glue
4	Smith	John	CLIS	Info Sci	lbsc690	Information Technology	98	js03@wam

Discussion Topic

Why is this a bad approach?

Goals of “Normalization”

- Save space
 - Save each fact only once
- More rapid updates
 - Every fact only needs to be updated once
- More rapid search
 - Finding something once is good enough
- Avoid inconsistency
 - Changing data once changes it everywhere

Relational Algebra

- Tables represent “relations”
 - Course, course description
 - Name, email address, department
- Named fields represent “attributes”
- Each row in the table is called a “tuple”
 - The order of the rows is not important
- Queries specify desired conditions
 - The DBMS then finds data that satisfies them

A Normalized Relational Database

Student Table

Student ID	Last Name	First Name	Department ID	email
1	Arrows	John	EE	jarrows@wam
2	Peters	Kathy	HIST	kpeters2@wam
3	Smith	Chris	HIST	smith2002@glue
4	Smith	John	CLIS	js03@wam

Department Table

Department ID	Department
EE	Electronic Engineering
HIST	History
CLIS	Information Stuides

Course Table

Course ID	Course Description
lbsc690	Information Technology
ee750	Communication
hist405	American History

Enrollment Table

Student ID	Course ID	Grades
1	lbsc690	90
1	ee750	95
2	lbsc690	95
2	hist405	80
3	hist405	90
4	lbsc690	98

Approaches to Normalization

- For simple problems (like the homework)
 - Start with “binary relationships”
 - Pairs of fields that are related
 - Group together wherever possible
 - Add keys where necessary
- For more complicated problems
 - Entity relationship modeling (LBSC 670)

Example of Join

Student Table

Student ID	Last Name	First Name	Department ID	email
1	Arrows	John	EE	jarrows@wam
2	Peters	Kathy	HIST	kpeters2@wam
3	Smith	Chris	HIST	smith2002@glue
4	Smith	John	CLIS	js03@wam

Department Table

Department ID	Department
EE	Electronic Engineering
HIST	History
CLIS	Information Stuides

“Joined” Table

Student ID	Last Name	First Name	Department ID	Department	email
1	Arrows	John	EE	Electronic Engineering	jarrows@wam
2	Peters	Kathy	HIST	History	kpeters2@wam
3	Smith	Chris	HIST	History	smith2002@glue
4	Smith	John	CLIS	Information Stuides	js03@wam

Problems with Join

- Data modeling for join is complex
 - Useful to start with E-R modeling
- Join are expensive to compute
 - Both in time and storage space
- But it is joins that make databases relational
 - Projection and restriction also used in flat files

Some Lingo

- “Primary Key” uniquely identifies a record
 - e.g. student ID in the student table
- “Compound” primary key
 - Synthesize a primary key with a combination of fields
 - e.g., Student ID + Course ID in the enrollment table
- “Foreign Key” is primary key in the other table
 - Note: it need not be unique in this table

Project

New Table

Student ID	Last Name	First Name	Department ID	Department	email
1	Arrows	John	EE	Electronic Engineering	jarrows@wam
2	Peters	Kathy	HIST	History	kpeters2@wam
3	Smith	Chris	HIST	History	smith2002@glue
4	Smith	John	CLIS	Information Stuides	js03@wam

SELECT **Student ID**, **Department**

Student ID	Department
1	Electronic Engineering
2	History
3	History
4	Information Stuides

Restrict

New Table

Student ID	Last Name	First Name	Department ID	Department	email
1	Arrows	John	EE	Electronic Engineering	jarrows@wam
2	Peters	Kathy	HIST	History	kpeters2@wam
3	Smith	Chris	HIST	History	smith2002@glue
4	Smith	John	CLIS	Information Stuides	js03@wam

WHERE Department ID = "HIST"

Student ID	Last Name	First Name	Department ID	Department	email
2	Peters	Kathy	HIST	History	kpeters2@wam
3	Smith	Chris	HIST	History	smith2002@glue

Entity-Relationship Diagrams

- Graphical visualization of the data model
- Entities are captured in boxes
- Relationships are captured using arrows

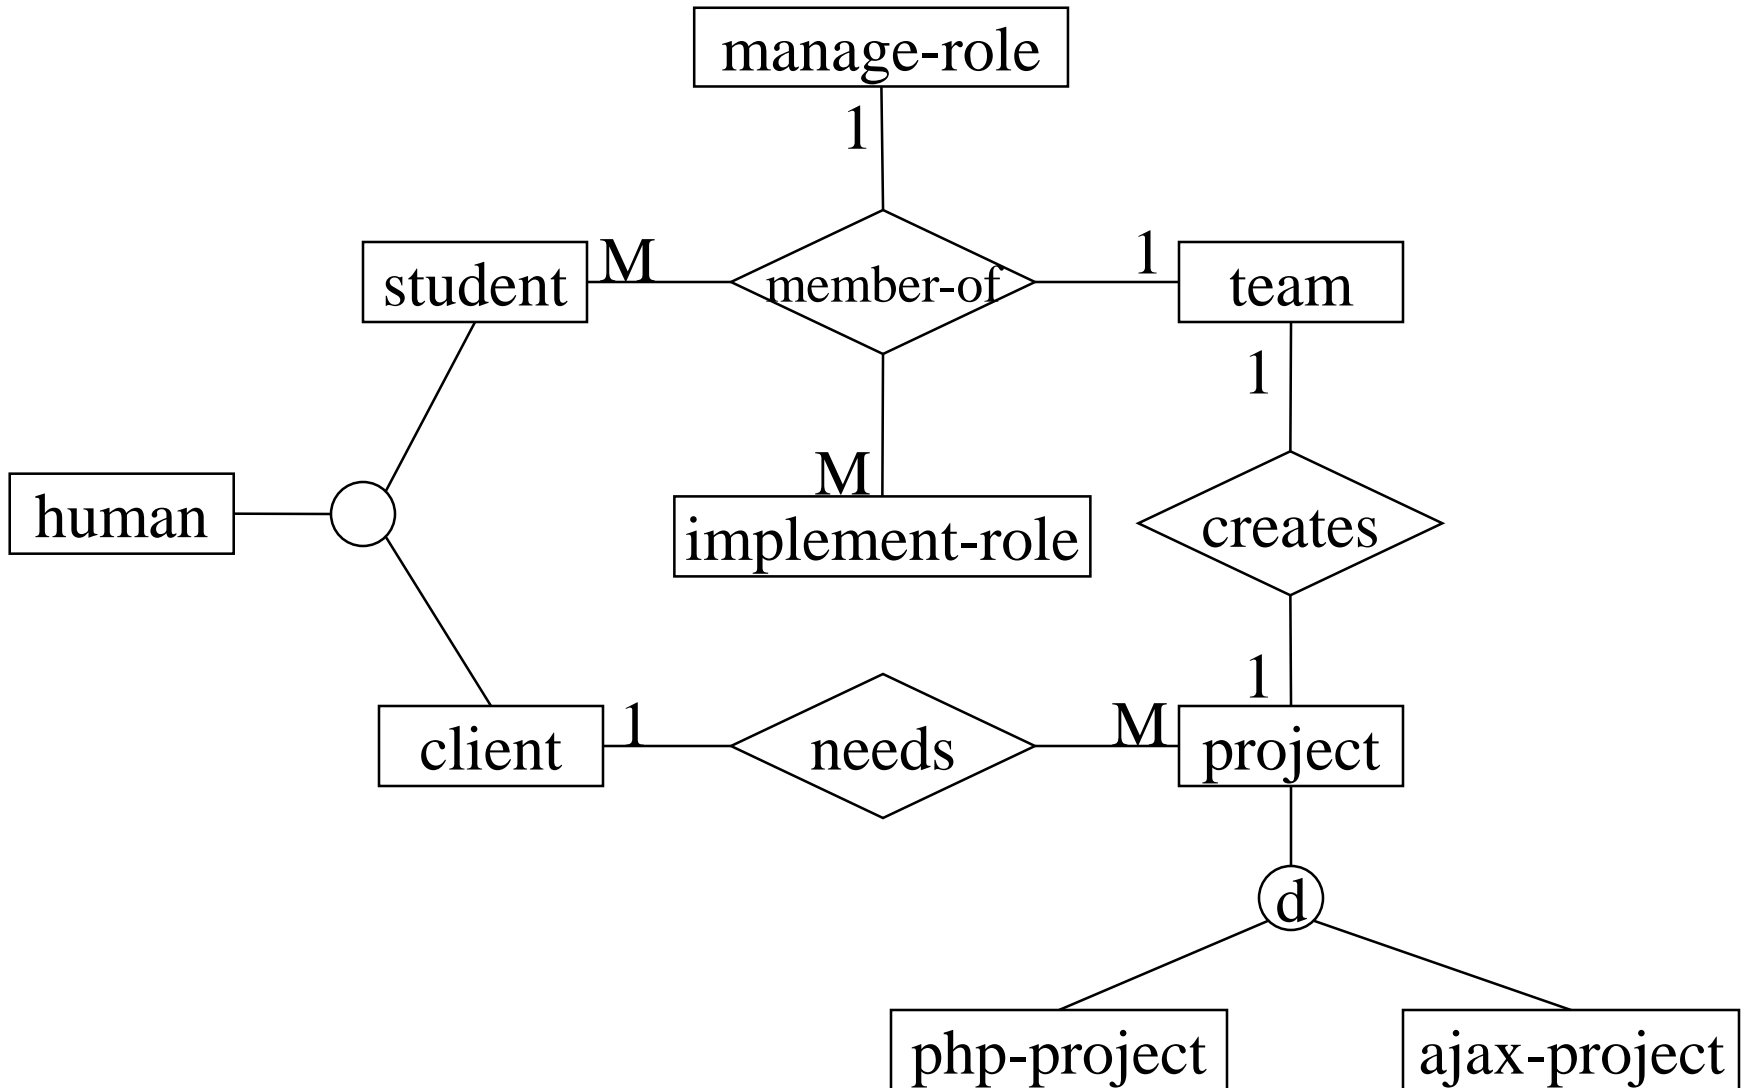

Registrar ER Diagram

Getting Started with E-R Modeling

- What questions must you answer?
- What data is needed to generate the answers?
 - Entities
 - Attributes of those entities
 - Relationships
 - Nature of those relationships
- How will the user interact with the system?
 - Relating the question to the available data
 - Expressing the answer in a useful form

“Project Team” E-R Example

Components of E-R Diagrams

- Entities
 - Types
 - Subtypes (disjoint / overlapping)
 - Attributes
 - Mandatory / optional
 - Identifier
- Relationships
 - Cardinality
 - Existence
 - Degree

Types of Relationships

Many-to-Many

1-to-Many

1-to-1

Making Tables from E-R Diagrams

- Pick a primary key for each entity
- Build the tables
 - One per entity
 - Plus one per M:M relationship
 - Choose terse but memorable table and field names
- Check for parsimonious representation
 - Relational “normalization”
 - Redundant storage of computable values
- Implement using a DBMS

Normalization

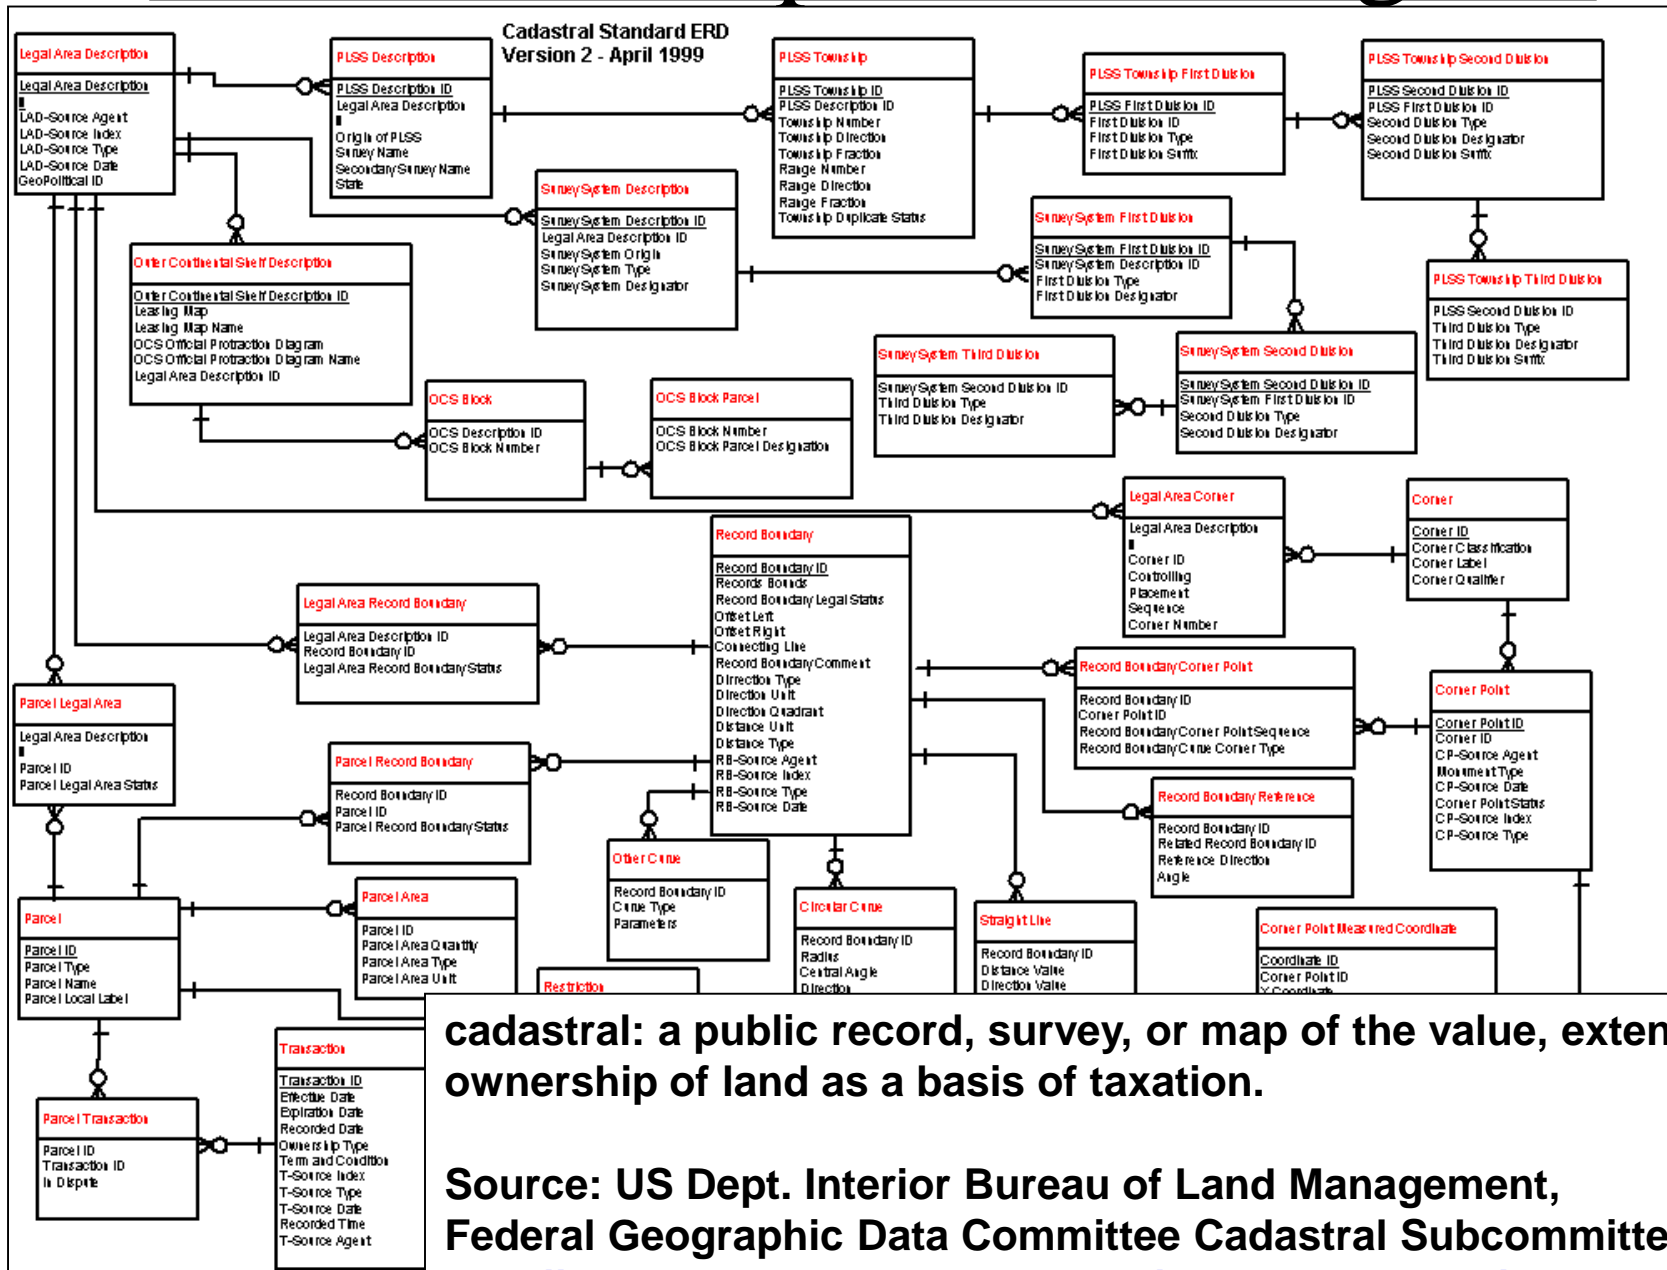

- 1NF: Single-valued indivisible (atomic) attributes
 - Split “Doug Oard” to two attributes as (“Doug”, “Oard”)
 - Model M:M implement-role relationship with a table
- 2NF: Attributes depend on complete primary key
 - $(\underline{\text{id}}, \underline{\text{impl-role}}, \text{name}) \rightarrow (\underline{\text{id}}, \text{name}) + (\underline{\text{id}}, \underline{\text{impl-role}})$
- 3NF: Attributes depend directly on primary key
 - $(\underline{\text{id}}, \text{addr}, \text{city}, \text{state}, \text{zip}) \rightarrow (\underline{\text{id}}, \text{addr}, \text{zip}) + (\underline{\text{zip}}, \text{city}, \text{state})$

- 4NF: Divide independent M:M tables
 - $(\underline{\text{id}}, \text{role}, \text{courses}) \rightarrow (\underline{\text{id}}, \text{role}) + (\underline{\text{id}}, \text{courses})$
- 5NF: Don't enumerate derivable combinations

Normalized Table Structure

- Persons: id, fname, lname, userid, password
- Contacts: id, ctype, cstring
- Ctlabels: ctype, string
- Students: id, team, mrole
- Iroles: id, irole
- Rlabels: role, string
- Projects: team, client, pstring

A More Complex ER Diagram

cadastral: a public record, survey, or map of the value, extent, and ownership of land as a basis of taxation.

**Source: US Dept. Interior Bureau of Land Management,
Federal Geographic Data Committee Cadastral Subcommittee**

<http://www.fairview-industries.com/standardmodule/cad-erd.htm>

Key Ideas

- Databases are a good choice when you have
 - Lots of data
 - A problem that contains inherent relationships
- Design before you implement
 - This is just another type of programming
 - The mythical person-month applies!
- Join is the most important concept
 - Project and restrict just remove undesired stuff

Before You Go

On a sheet of paper, answer the following (ungraded) question (no names, please):

What was the muddiest point in today's class?
