DNA. Through news accounts and crime stories, we're all familiar with the **fact** that the **DNA** in our cells reflects each individual's unique identity and how closely related we are to one another. The same is true for the relationships among organisms. **DNA**, or deoxyribonucleic acid, is the molecule that makes up an ...

by JH Relethford - 2001 - [Cited by 73](#) - [Related articles](#)

Likewise, the **fact** that we find no mtDNA sequences in living **humans** as divergent as the Neandertals can be interpreted in several ways. This finding might be a reflection of species extinction, but it could also reflect the effect of **genetic drift** and **lineage** extinction. The observation that Neandertal mtDNA is no more similar to ...

Human evolutionary genetics - Wikipedia

https://en.wikipedia.org/wiki/Human_evolutionary_genetics ▼

Jump to **Genetic differences among modern humans** - With their rapid expansion throughout different climate zones, and especially with the availability of new food sources with the domestication of cattle and the development of agriculture, human populations have been exposed to significant selective ...
